

Spotlight on Natural Resources and Environmental Sciences Graduates

- Bryce Wright '19 -

Environmental Scientist:

E & A Consulting Group Inc.
Omaha, NE

Doane Highlights:

B.S. in Environmental Science with an emphasis in Biology along with a minor in Leadership. I served as Doane's Natural Resources and Environmental Sciences department student worker from 2018 to 2019 as well as working at the IT help-desk for four years. I was also a member of the Doane Choir from 2016-2019. I was a member of the Doane Football team from 2015-2018. I completed research on the effects on decorating behaviors of decorator crabs due to climate change. Additionally, I was a member of the Alpha Pi Epsilon fraternity and served on the Hansen Leadership Advisory Board.

Current Highlights:

I am currently living in Omaha and working for a civil engineering firm. My focuses in work are working with civil and commercial developers as well as natural resource offices to conduct erosion inspections, Post-construction stormwater management inspections, Phase 1 Environmental Site Assessments, and my personal favorite Wetland delineations. This is all to ensure that with new construction we protect the environment in any way possible to alleviate flooding and help with water resources in many different areas.

Bryce Remembers:

"What I remember best about Doane is that it was a community. Finding the people that had similar mindsets allowed me to excel in class and branch out and become the best person I could be. The education brought a wide variety of skills and knowledge that I have been able to use everyday in my current job from learning about natural resources to ecosystems as a whole. Doane was more than just school for me it gave me the ability to find out what I was passionate about professionally and personally and granted me the freedom to pursue it in college and into my career."
